

**Medical Place, providing
quality medical, laboratory,
dental and other equipment and
supplies for over 23 years.**

Medical Place was incorporated, May 1983 in the State of Alabama. What started as a one room office was later moved to an over 4,000 sq ft. glass front building on Carter Hill Road. Today, Medical Place has completed a new office and warehouse facility with approximately 13,000 sq. ft. in Montgomery, Alabama. Medical Place has two additional warehouse locations available to provide a greater stock capacity.

The telemedicine technology platform paves the way for existing, as well as emerging, healthcare companies to take advantage of opportunities in disease management, clinical studies, telemedicine, health education, wellness, and self care. To date, a wide variety of organizations desiring better outcomes and increased productivity have turned to telemedicine's tools and technologies for delivering valuable services to their patient populations.

Telemedicine monitoring system serves as the interface between patients at home and care providers, facilitating patient education and monitoring of chronic conditions. The system includes monitoring technologies, clinical information databases, Internet-enabled decision support tools, health management programs and content development tools. Through increased communication, behavior modification, and prevention, the telemedicine improves quality of care. If you would like to find out more information about telemedicine, please contact us.

Monitoring Devices for Telemedicine

- Increases the convenience and effectiveness of home (remote) patient management
- Home monitoring products provide accurate measurements for cardiovascular disease, diabetes and other chronic conditions
- Compatible with multiple Access Points
- Uploads data
- Access Points almost instantly
- Available with wired or Bluetooth® wireless communication

Medical Place offers innovative products that combine cutting-edge technology and convenience for telemedicine and other health care providers. Our products have been developed to increase the convenience and effectiveness of home patient management. System integrators can now provide units to remotely located patients enabling them to monitor their blood pressure and weight at home. These products can increase the effectiveness of applications including clinical trials, disease management and in-home or remote patient management and are ideal for health system integrators.
